

New Product

I have become aware of a particular product that really stands out that I want to make available to you. As you know, there have been desulfators on the market for years now. Many users of these products have complained that the results were limited or hard to measure at best. There is a new product on the market that uses a different technology that really gets results. This product is called THE BATTERY LIFE SAVER.

I had heard a stories of users of this product having really good results, but what really got my attention was when a dealer I am close to tested THE BATTERY LIFE SAVER. Below are the results that Tom Kingsland of Backwoods Solar got over a two month period. The graphs show the specific gravity readings of each cell of each of 12 T-105 batteries. This bank has been in use for six years. The red bars indicate a reading taken on June 5, 2005, after fully charging the batteries. Then, THE BATTERY LIFE SAVER was installed. The green bars indicate a reading taken on August 15, 2005. According to Tom, "this is the tightest and best set of readings I have EVER had on this bank of batteries, and that includes when it was brand new."

This product represents a real technological advance. THE BATTERY LIFE SAVER measurably enhances renewable energy systems. To encourage you to get this product out to your clients, I would like to offer it to you at a special price. The suggested retail price is \$49.95 (see attached Data Sheet and Flyer). **For a limited time, I am offering this product to you at \$32 per unit on each order of 10 units. Call 800-777-6609 and ask for Sales.**

Sincerely,

David Katz, President
Alternative Energy Engineering
