

Fountain Pump

This is a RULE brand 360 gallon per hour boat bailing pump. Powered by a 12 volt battery this simple centrifugal pump moves a lot of water, over 6 gallons per minute, but lifts less than 6 feet elevation. Centrifugal pumps can run dry without harm. Stainless steel motor shaft. Strainer on base picks up water without clogging and snaps off for cleaning. Pump is totally submersible in the water source pool.

When powered direct from a solar panel, it runs about half speed on a 20 watt panel. This makes a good garden fountain or simple solar demonstration for schools and fairs. As an educational solar demonstration it turns a lot of water in a shallow pan, but stops when your hand casts a shadow on the solar panel.

12 volt, about 2 ampere current usage. 2 1/2" x 3 1/2". 1 year warranty.

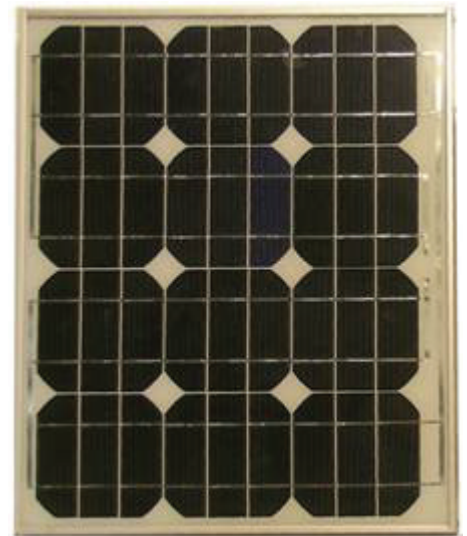

P-RULE: \$24

Small Glass/Aluminum Framed Solar Module

At this time, we do not have a small Unisolar PV module which we can sell to directly power our Fountain pump. Temporarily, we will offer a 20 watt module made in India with a ten year warranty. It has a 16.4 volt rating at 1.22 amps. It is 21.3" long and 17.7" wide. At this time, we do not have a mount for it.

S-PVINDIA20 20 Watt Module (includes freight to lower 48 states) **\$175**
